ABSTRACT

An accent frame for decorating and covering up the area of a ceiling, wall, or floor, surrounding a recessed article of a type having a finishing ring or covering plate. The accent frame is a rigid sheet of thin material that includes an aperture of a size and shape corresponding to the size and shape of the structure cutout. It further includes a decorative outer edge. The
10 frame is easily installed by centering the frame aperture over the cut out and sandwiching the frame between the finishing ring or covering plate and the structure. Attaching the ring or covering plate to the recessed article secures the frame. The shape and coloration of the accent frame may suggest ornamental objects or geometric shapes to achieve a decorative effect.
